# Custom Development

Sage 100 cloud:

Sometimes the out of the box software doesn't meet your needs. You may have customer or vendor requirements or you are in a niche industry with few technology options. That is when you may need to have custom software application developed for your company. We have been a Master Developer for Sage 100 since 1999, working with many different industries regarding their unique needs.

In our custom development process, we will work with you to understand what you are trying to accomplish, and if it makes business sense for your company. We will then prepare a Solution Design document including estimate for you to review and approve before we start on the actual programming.

In our development of your custom programming, we do the actual programming on a development system, and move it to a test platform for you to test and sign off of the custom application, before moving it to your live server.

RV and Marine custom Sage 100cloud programming. We have been doing custom programming in Sage 100 for over 23 years in the Recreational Vehicle, Manufactured Housing and Cargo/Toy Hauler Trailer industry. If you are in any of these industries give us a call to discuss the multiple enhancements that we have done to help in the unique reporting and tracking requirements by the government and safety agencies.

Other Custom development projects, including e-Commerce sites.

We also do other custom business stand alone software that is available to any of your company's team or people outside of your company. For example:

- **Dealer portal for the RV Industry** for Warranty Claims and Parts Sales.
- **Multiple eCommerce websites** using NOP Commerce as the platform integrating into the ERP Systems.

- **Fuel Cooperative Automatic Pricing Alerts** being populated from an Access database, which included special pricing for specific customers.
- **Job Cost Access program**- for a cabinet company as a stand-alone program to cost out the customer jobs with burden and overhead. This company used QuickBooks as their accounting system.
- **Multiple Microsoft Visual Studio projects** for various customers that we have integrated with their ERP systems.
